## NANO DRY LUBRICANT

- Dries FAST to prevent the collection of dirt and dust.
- No oily residue, nonstick.
- Moisture-displacing film evaporates away leaving thin dry film of Nano lubricants.
- Ozone friendly - CFC and tricholethane free.
- Perfect for polymers and ceramics.
- Protects against corrosion and rust at the Nano level.
- Reduces friction to extraordinarily low levels to reduce wear and improve efficiency.
- Penetrates deeply to break friction points allowing mechanical components to move or slide easily.

Works great on garage doors, RV slide-outs, truck hinges, gears, oven chains, motorcycle or bicycle chains, ignition, motors, firearms, reciprocating sliding mechanisms and window tracks.

Perfect for use on aviation, industrial, trucking, auto, marine and other mechanical equipment.

**MADE IN**  
  
**THE USA**

NANO Pro MT Dry Lubricant is a highly engineered mixture of Dry Lube with CERFLON and proprietary NANO materials suspended in lubricating oil. It stays put, without squeezing out like liquid lubricants, making NANO ideal for reciprocating motions applications such as gear and chain lubrication. Superior nano materials lubricate to reduce friction and wear, preventing fretting and galling even in extreme pressure and high temperature applications. The CFC and 1,1,1-Trichloroethane free aerosol dries fast and clean, with no oily residue, providing instant, long lasting protection.
